Recommendation: We reiterate a **Buy** recommendation on Kofola CeskoSlovensko with a **target price of CZK313** per share. (The previous recommendation and target price were Buy and CZK381.) After the pandemic-related restrictions that hit the restaurant business hard, Kofola was again impacted by high input and energy price inflation. We expect organic growth in all three of Kofola's core businesses. In addition, we see growth potential through M&A operations, where Kofola has been quite active in the recent past.

Business Outlook: In our forecasts, we estimate an average annual EBITDA growth rate of +5.7% and revenue growth of +6.4% over the period 2023-2027. In 2027, revenues should reach CZK10.8bn and EBITDA CZK1.5bn. This year, we expect input costs (especially packaging and sweeteners) to rise rapidly, but Kofola should demonstrate cost discipline in other cost items. According to our forecasts, this year's EBITDA will be at the upper end of management's target (CZK1.10-1.25bn). We estimate that it will grow +9.6% yoy to CZK1.217bn.

Valuation: We used a discounted free cash flow model to value Kofola's shares. We discounted our projections over the 2023-2027 forecast period using a cost of capital of 8.2%-9.1% and a terminal value of 9.1% at a long-term growth rate of 2%. **We set our target price at CZK313 per share.** Our price offers a growth potential of +27.8% compared to the current market price. The total potential, including dividend yield, is +32.4%. This is equivalent to a Buy recommendation.

We value Kofola at a P/E of 21.6x and EV/EBITDA of 8.4x. The sector median of comparable companies is 24.1x and 18.8x, respectively. Thus, Kofola trades at a significant discount to its peers.

Key Risks: The price of input materials, especially packaging materials and sweeteners, is obviously a significant risk. Energy prices remain in question. In addition, any restriction of distribution channels, as in the case of the pandemic, is a risk. A fall in real wages could also play a role, which could affect demand for the group's products. Finally, the planned transition to a higher VAT rate on beverages could have a negative impact on demand.

Upcoming Events: Kofola plans to release its 1Q23 results on 1 June.

In recent years, Kofola has typically released selected operating data (revenue and EBITDA) in mid-February. The full results were then included in the annual report. The presentation took place on 13 April.

In the last quarter of 2022, Kofola achieved revenues of CZK1.81bn (+15.5% yoy) and EBITDA of CZK230m (+62.5% yoy). This most likely reflects the price increase during the year. Tight control of operating costs (e.g. marketing, admin) helped meet the full-year guidance. Another major contributor was the stabilization of energy costs in the fourth quarter alone, which fell from the highs seen during the year. (Kofola buys energy on the spot market.) However, the increase in raw materials (sweeteners, packaging materials) was almost as high as the increase in sales. The most important segment, CzechoSlovakia, which drove the results, increased EBITDA in 4Q to CZK225m (CZK166m in 4Q21). The growth was driven by a lower comparative base, with 4Q21 still impacted by Covid restrictions. Fresh&Herbs reached CZK18m (CZK3m a year ago). Only the Adriatic region recorded a loss of CZK13m, which is half of what it was a year ago (CZK-26m). Net profit in 4Q was CZK54m (CZK-60m a year ago). Last year, total EBITDA was CZK1.11bn (-1.6% yoy) on revenues of CZK7.88bn (+18.7% yoy). Net profit for the full year decreased by 8.8% yoy to CZK209m. As a reminder, Kofola achieved its EBITDA targets of CZK1.08bn and revenue growth of +19%.

Leverage (Net debt/EBITDA) is 2.97x (3.06x at the end of 2021). This is in line with the target of <3.0x.

Projections of 1Q23 results

Kofola is expected to report first quarter 2022 results on 1 July.

CZKm	Q1 22	Q1 23 (KB)	y/y
Sales	1,506	1,708	13.4%
EBITDA	112	177	58.8%
margin	7.4%	10.4%	3.0pps
EBIT	-35	34	n.m.
Net Profit	-106	-5	n.m.

Source: Kofola CeskoSlovensko; Economic & Strategy Research, Komerční banka

In the first quarter, sales are expected to grow +13% yoy, with volumes down 8%. This was already announced as part of the 2022 results. In addition, energy prices, which Kofola buys on the spot market, have fallen. Sweetener costs are likely to have risen, but like energy, packaging costs should also fall. We expect tight cost control. The first quarter is the weakest in terms of seasonality. Due to good weather, the summer months or quarters are the most important from

a full-year perspective. We expect Kofola's commentary to be cautious for the next quarters, but to confirm the full-year guidance.

Kofola is expected to achieve sales growth of +13% yoy to CZK1.7bn in 1Q23. Kofola increased its production prices by +20%. This, together with falling real wages, is likely to have impacted demand. According to earlier data, volumes declined by 8% yoy. We expect lower energy prices. Packaging prices should also follow a downward trend, while sugar prices continued to rise in 1Q23. We also assume that Kofola has saved on other operating costs, such as marketing and administration. We expect Kofola's EBITDA to reach CZK177m (+59% yoy). For 1Q23, we expect a small net loss of CZK4.6m (CZK-105.6m in 1Q22).

FY projection: Kofola expects EBITDA of CZK1.10-1.25bn. Total revenues are expected to grow +12% yoy. Leverage remains below 3.0x and there is a dividend outlook of at least CZK11.30 per share, with a final decision expected this fall. We expect Kofola's management to confirm these goals. Our 1Q23 estimates imply around 15% of the FY guidance.

We expect that, as in previous presentations, Kofola will show the development of its sales in the months following 1Q. It is also possible that there will be an update on M&A developments.

Long-term forecasts

Sales (CZKm)

EBITDA (CZKm)

Source: Kofola CeskoSlovensko; Economic & Strategy Research, Komerční banka

Kofola has three business pillars. These are the CzechoSlovakia operations, the Adriatic region, which includes Slovenia and Croatia, and Fresh&Herbs, which includes the UGO salaterias, the tea business, syrups, juices and others.

Kofola's most important sector is CzechoSlovakia. Last year, it accounted for 79% of the EBITDA of the entire Kofola Group. The Adriatic segment accounted for 16% and Fresh&Herbs for the remaining 5%. The development in recent years has been negatively affected first by the pandemic and then by the difficult energy situation.

EBITDA (2022)

Source: Kofola CeskoSlovensko

EBITDA by segments (CZKbn)

Kofola's guidance is to achieve an EBITDA CZK1.10-1.25bn this year. This corresponds to yoy growth of +5.8% (midpoint). Sales will be affected by the price increase of Kofola's beverages. On the other hand, demand is expected to decrease due to the decline in real purchasing power. In 1Q, Kofola reported total revenue growth of +13% yoy, although volumes sold were down 8% yoy. Our EBITDA estimates are closer to the upper end of Kofola's guidance. We expect Kofola to achieve an EBITDA of CZK1.217bn this year (+9.6% yoy) on a revenue growth of +11.7% yoy to CZK8.796bn.

The consolidation package of Prime Minister P. Fiala's government includes an increase in VAT on beverages. The VAT rate is to be increased from the current 15% to 21%. This will most likely lead to higher prices for consumers. This could have a negative impact on demand and sales volumes. We assume that the government coalition will pass the consolidation package with the strength of its majority and that the change will take effect from next year.

Over the forecast period (2023-2027), we estimate that total revenues will grow at CAGR of +5.7%. The Czech Republic and Slovakia will remain Kofola's most important markets. Together, they are expected to generate nearly 80% of total revenues.

Kofola's business is naturally seasonal. The second and third quarters are the strongest. The weather is more favorable (warmer) and tourism increases, holidays are taken and customer consumption in restaurants increases. The third quarter is the strongest and has averaged over 30% of total annual sales in recent years. The second quarter contributes approximately 28%.

By contrast, the first and fourth quarters are by far the weakest. On average, the last quarter of the year accounts for approximately 23% of total sales, compared to approximately 19% in the first quarter.

The main material cost items are packaging materials (PET), sweeteners and concentrates. In 2022, PET accounted for 57.8% of material costs, sweeteners 23.8% and concentrates 18.4%. The charts below show that packaging prices have been falling since about the middle of last year. They are at a much more comfortable level than sugar costs. While packaging costs have come down from their highs, the price of sugar remains a challenge. Kofola buys energy on the spot market. Following the energy crisis that peaked last year, there was a significant power price reduction at the end of 2022. This was one of the reasons why Kofola was able to meet its full year target.

Kofola strives to strictly control operating costs. We expect sales, marketing and distribution expenses to grow by +4.1% this year and by +5.2% on average over the forecast period (CAGR 2023-2027). We estimate that administrative expenses will grow at a similar pace (+4.5% yoy). We then estimate total operating expense growth at +5.1% through 2027.

Kofola plans to achieve EBITDA of CZK1.10-1.25bn this year, with sales growth of +12%. We estimate EBITDA of CZK1.217bn, which is practically at the upper end of Kofola's full-year target. We estimate top-line growth of +11.7%, which is in line with management's guidance.

In the forecast period, EBITDA is expected to reach CZK1.47bn. This corresponds to a CAGR of +5.7%.

Source: Kofola CeskoSlovensko; Economic & Strategy Research, Komerční banka

In 2020, the company's margin declined due to the restrictive measures introduced because of the Coronavirus pandemic. This had an overwhelming impact on the HoReCa (hospitality) segment with a significant reduction in demand. As a result, the EBITDA margin declined by approximately one percentage point to 16.7% this year (2020). It then increased slightly with the easing of restrictions, only to be hit again in 2022, this time in the form of high raw material and energy inflation. In 2022, the EBITDA margin was 14.1%. In the coming years, we estimate an EBITDA margin of around 14%.

Dividend policy

The dividend is expected to increase

We see a upside potential for dividends.

Kofola intends to pay an annual dividend of CZK300m. This is equivalent to CZK13.50 per share. Such a dividend was actually paid by Kofola in 2019-2021. Last year a dividend of CZK11.30 was paid. The decrease was caused by a turbulent year (2021) that was significantly affected by the pandemic.

Kofola announced a similar payout of CZK11.30 this year. After the pandemic years, the cause, for a change, was the energy crisis. This is probably the reason for the expected payout, which is lower than the company's dividend policy. As in previous years, shareholders should decide on the dividend in the fall, when Kofola has a better view of the year's results.

We expect Kofola to return to a payout of CZK13.50 per share in the coming years. This could bring the payout ratio down to 60%. This is a much lower level compared to 2019-2021. Based on our price target (see below), the projected dividend would represent a dividend yield of around 3.6%.

Dividend projections (CZK)

Source: Kofola CeskoSlovensko; Economic & Strategy Research, Komerční banka; in year in which is paid

However, according to our projections, Kofola will be able to pay out a higher dividend to shareholders. We expect significant room for dividend growth over the forecast period as earnings per share (EPS) increase while debt decreases (see below). According to our estimates, the dividend could increase to CZK15/share.

On the other hand, we also see risks that could affect the dividend payout, one of which could be potential acquisitions. In recent weeks there has been speculation in the press about interest in buying the Pivovary CZ Group (breweries). This could affect the ability to pay the dividend. The dividend payment could also be affected by the market situation (see the dividend approval at the end of the year) or the high level of debt.

Indebtedness

Kofola's leverage, as measured by the net debt/EBITDA ratio, increased sharply in 2020 (see chart below). This was due to the acquisitions of Ondrášovka and Karlovarská Korunní. At the end of last year, this ratio was just below 3.0x. We consider this debt level to be comfortable.

Bank covenants are set at 3.5x.

Leverage to drop to 1.6x.

According to our projections, net debt/EBITDA should continue to fall below 2.0x. Such a leverage level would of course consolidate capacity and help pay a dividend.

The chart below shows that even though the leverage increased more than expected, Kofola was able to quickly reduce it to a reasonable level. At the same time, even with this level of indebtedness, Kofola has demonstrated that it has not lost its ability to pay a dividend and that this has not affected distributions to shareholders (see charts above and below).

Leverage (Net Debt / EBITDA)

Source: Kofola, Economic & Strategy Research, Komerční banka

M&A activities

In addition to organic growth, acquisition is certainly another way to develop the company.

Potential acquisition targets could include operations that would further expand the existing core soft drinks business. Another area where potential acquisitions could be recruited could be in the Fresh&Herbs sector (e.g. local sourcing, healthy ingredients). We expect that any potential acquisitions would be in line with the sustainability philosophy that Kofola promotes.

Recently, the press reported Kofola's interest in acquiring a majority stake in the Pivovary CZ Group (breweries). This would be the first such transaction in the brewing segment. However, we do not expect Kofola to further develop the alcoholic beverages sector with hard liquor or wine, for example. We expect any acquisitions to complement the existing product portfolio.

Not all M&A transactions would necessarily result in a significant leverage increase. In addition, Kofola would like to keep its net debt/EBITDA multiple below 3.0x. In case of an acquisition, the indebtedness should not exceed 3.5x. Kofola could finance major acquisitions by issuing new shares, through a joint venture or with a financial partner.

Valuation

Sector comparison

Kofola trades at a significant discount to its peers.

The Kofola Group does not have any comparable publicly traded competitors in the Czech Republic. Therefore, we selected companies with a similar focus that sell their products in the Czech Republic or other European countries for comparison. At the same time, we used the S&P 500 Soft Drinks sector index for comparison with the overall soft drinks market.

The table below shows selected multiples that we use to compare Kofola to its peer group. In terms of P/E, Kofola trades at a significantly lower premium on earnings compared to competitors. However, the discount is even higher for EBITDA or sales multiples (EV/EBITDA, EV/Sales and P/S). On the other hand, Kofola offers an above-average dividend yield of 4.6% relative to the sector.

A relative comparison of the selected multiples indicates a significant discount in Kofola's valuation compared to its peers.

Source: Bloomberg, Economic & Strategy Research, Komerční banka

Please note that relative comparisons may be misleading. This is mainly due to the heterogeneity of individual companies in terms of size, product mix, geographic segmentation or capital structure. We therefore consider relative comparisons to be a complementary valuation method only.

Target price

A discounted cash-flow model was used.

A new target price is set at CZK313 per share.

We have valued Kofola using a two-step discounted free cash flow (DCF) model with a five-year explicit forecasting period. The free cash flow is discounted using a weighted average cost of capital (WACC) in the range of 8.2%-9.1% over the period 2023-2027 and 9.1% for perpetuity with a long-term growth rate of 2%. Based on the DCF method and the discount rates below, **we estimate the fair value of the Kofola to be CZK313 per share.**

Kofola valuation

	2023e	2024e	2025e	2026e	2027e

Source: Economic & Strategy Research, Komerční banka

Main risks

- **Restrictive measures:** Any restrictions, such as those during the coronavirus pandemic, will have a negative impact on Kofola's business. This is because they restrict distribution channels and reduce demand for the group's products.
- **Changing Consumer Preferences:** Consumer preferences evolve over time, so it is important for the company to stay abreast of current trends and directions in this area. For example, there has recently been increased interest in healthy eating. Failure to adapt could jeopardize Kofola's sales and market share.
- **Developed markets:** In the countries where the Kofola Group operates, the soft drink market is stagnating. Both international and local producers compete by offering a wide range of products. This situation increases the risk of price erosion or loss of market share.
- **Retail segment pushes down margins:** Customers generally prefer to buy discounted goods, which the retail segment can offer. This makes the retail segment more important and increases its bargaining power vis-à-vis the Kofola Group. This increases the pressure on selling prices or prevents input price increases from being reflected in the final price.
- **Inputs:** Inputs such as sweeteners and packaging materials are among the most significant cost items for the company. Their prices are based on market prices for raw materials such as sugar and polyester resin (or crude oil). A sudden increase in the price of these raw materials would have a negative impact on the profitability of the products and the Kofola Group as a whole.
- **M&A activity:** Organic growth is rather limited for Kofola. Therefore, growth through acquisitions (as was the case with Ondrášovka and Karlovarská Korunní) is proposed. Acquisition is a challenging process that does not always work in the company's favor, e.g. there is a risk of overpaying the target company.
- **Exchange rate:** Many of the raw materials (mainly sugar) used in the Group's production are purchased in euros or in local currencies with a euro-based valuation. As some of the countries in which the Group operates are outside the euro zone, a portion of the Group's sales are denominated in local currencies other than the euro. As a result, the Group is exposed to the risk of fluctuations in the euro exchange rate against these local currencies.
- **Interest rate fluctuations:** As the Kofola Group has bank loans in its portfolio, it is exposed to interest rate risk, which is partially offset by hedging derivatives.

Disclaimer

The information herein is not intended to be an offer to buy or sell, or a solicitation of an offer to buy or sell any securities. All information and opinions have been obtained from or are based on sources believed to be reliable, but their completeness and accuracy are not guaranteed by Komerční banka, a.s., even though Komerční banka, a.s. believes them to be fair and not misleading or deceptive. The views of Komerční banka, a.s. reflected in this document may change without notice.

Komerční banka, a.s. and its affiliated companies may from time to time deal in, profit from the trading of, hold or act as market makers of securities, or act as advisers, brokers or bankers in relation to securities or derivatives thereof emitted by persons, firms or entities mentioned in this document.

Employees of Komerční banka, a.s. and its affiliated companies, or individuals connected to them may from time to time have a position in or be holding any of the investments or related derivatives mentioned in this document. The authors of this document are not authorized to acquire the investment instruments mentioned in this document. This does not apply to cases when the investment recommendation mentioned in this document represents dissemination of an investment recommendation earlier produced by third parties according to Chapter III of regulation (EU) 2016/958. Komerční banka, a.s. and its affiliated companies are under no obligation to provide any services to their clients on the basis of this document.

Komerční banka, a.s. does not accept any liability whatsoever arising from the use of the material or information contained herein beyond what is required by law. This research document is primarily intended for professional and qualified investors. Should a private customer obtain a copy of this report, they should not base their investment decisions solely on the basis of this document and should seek independent financial advice. The investors must make their own informed decisions regarding the appropriateness of their investments because the securities discussed in this report may not be suitable for all investors.

The performance attained by investment instruments in the past may not under any circumstance serve as an guarantee of future performance. The estimates of future performance are based on assumptions that may not be realized. Investment instruments and investments are connected with different investment risks, the value of any investment can rise and fall and there is no guarantee for the return of the initial invested amount. Investment instruments denominated in foreign currencies are also subject to fluctuations caused by changes in exchange rates, which can have both positive and negative influences particularly on the prices of the investment instrument and consequently on the investment return.

This publication is issued by Komerční banka, a.s. which is a bank/stockbroker according to the applicable legislation and thus regulated by the Czech National Bank. Komerční banka, a.s. applies various measures to prevent conflict of interests in the process of creating investment recommendations, such as the implementation of an appropriate internal separation including information barriers between different departments of Komerční banka, a.s. in compliance with the requirements imposed by applicable regulation. The employees of Komerční banka, a.s. proceed in accordance with the internal regulations governing conflict of interest.

The evaluation of employees creating investment recommendations is never by any means tied with the volume or profit of the trades with instruments mentioned in this document done by Komerční banka, a.s., or the trades of Komerční banka, a.s. with the issuers of such instruments. However, the evaluation of the authors of this document is linked to the profits of Komerční banka, a.s. which also partially include the results of trading with investment instruments.

The recommendations mentioned in this document are intended for the public and the document before its publication is not available to persons not involved in the creation of this document. As per our practice, the issuers do not receive a copy of research reports prior to their publication. Each author of this research report hereby states that (i) the views expressed in the research report accurately reflect his or her personal views about any and all of the securities or issuers at stake.

This document and its contents is not designed for persons with permanent residence or seat in the United States of America and to persons who are deemed as "U.S. persons", as defined in Regulation S under the US Securities Act of 1933, as amended.

Please refer to our website <http://www.trading.kb.cz> for more details.

The recommendation in this document and/or the document itself was not disclosed to the issuer before its dissemination.

This recommendation is not updated at regular intervals. The date of the next update has not yet been determined and finally will be influenced by relevant changes of the facts used as the ground for this recommendation to reflect proper development in the industry and/or the analyzed company.

The main methods KB is using for setting target price for stocks are discounted free cash flow analysis and sector comparison. Other methods may also be used if deemed appropriate by the analyst (e.g. sum of parts valuation, discounted dividend valuation, discount / premium to NAV). Target price is set for the time period of 12 months. KB is using three grades of investment recommendation: buy, hold and sell. The recommendation is set for the time period of the next 3-6 months. The most important factor for setting the recommendation is the difference between actual market price and target price calculated by KB equity research. The recommendation also reflects other factors the analyst expects to influence the stock and market in the time period of 3-6 months after its publication. The target price substantially above current price does not automatically mean a buy recommendation for the 3-6 months following the first period of 3-6 months since publication of the recommendation. Valuation methods and factors key for setting the recommendation are explained in the text of each analysis.

The chart below shows the structure of grades of valid investment recommendations of equity research of KB Economic & Strategy Research (8 recommendations).

Investment recommendations of KB equity research

Source: Economic & Strategy Research, Komerční banka

KB Equity Research ratings on a 12 month period

BUY: absolute total shareholder return forecast of 15% or more over a 12 month period.

HOLD: absolute total shareholder return forecast between 0% and +15% over a 12 month period.

SELL: absolute total shareholder return forecast below 0% over a 12 month period.

Total shareholder return means forecast share price appreciation plus all forecast cash dividend income, including income from special dividends, paid during the 12 month period. Ratings are determined by the ranges described above at the time of the initiation of coverage or a change in rating (subject to limited management discretion). At other times, ratings may fall outside of these ranges because of market price movements and/or other short term volatility or trading patterns. Such interim deviations from specified ranges will be permitted but will become subject to review by research management.
