Recommendation: We reiterate our Buy rating on Kofola ČeskoSlovensko with a price target of CZK402 per share (previously Buy and CZK313 on May 29, 2023). We expect Kofola to deliver significant earnings growth to its shareholders based on two pillars. First, it will be organic growth, and the contribution from recent acquisitions, especially the Pivovary CZ group, will also be significant starting in the second quarter of this year.

Business outlook: Kofola's EBITDA is expected to reach CZK1.55-1.80bn this year, representing +33.6% yoy growth on +25% higher revenues. According to our model, results should be at the upper end of the FY target. The compound annual growth rate (CAGR 2028) should reach +11.6% for EBITDA and +8.9% for revenues. Kofola has been very active in M&A. We do not rule out further acquisitions as we believe Kofola will continue to closely monitor all opportunities, but we expect Kofola to now focus on integrating new units and achieving synergies.

Valuation: We have used a DCF (Discounted Free Cash Flow) model to value Kofola shares. We discounted our 2024-2028 estimates using 7.2-8.4% cost of capital and 8.4% for the terminal value. Our valuation also includes a discount for low liquidity. We assume a long-term growth rate of 2%. Based on the DCF, we arrive at a valuation of Kofola of CZK402 per share. This represents a potential of +34.4% compared to the current market price. The TSR is +40.8%. This corresponds to a Buy recommendation.

Based on our forecast, we value Kofola at a P/E 11.3x and EV/EBITDA of 6.7x. The sector median is higher at 21.5x and 14.2x, respectively. Thus, Kofola trades at a large discount to its peers. One reason for this could be the small free float. On the other hand, it offers a much higher dividend yield, probably by far the highest among its peers.

Risks: High price increases for raw materials (sweeteners or packaging materials) are among the main risks. Or, for example, high energy prices, as in the crisis years. Restriction of distribution channels, as in the case of a pandemic. Demand can be affected by a decline in real consumer purchasing power.

Upcoming Events: Kofola is expected to report 2Q24 results on September 23.

Company results

Kofola's latest published results are for the first quarter of this year. Seasonally, the beginning of the year is the weakest. Kofola has reported a decent organic growth. This was also supported by recent acquisitions. The results were ahead of estimates and Kofola's management reiterated its guidance for the full year.

Review of 1Q24

Source: Kofola; Economic & Strategy Research, Komerční banka, *Company consensus

Kofola reported **sales growth of +22.1% to CZK2,091m** in 1Q24. CZK. That was 2.8% higher than the consensus. This is surprisingly positive, as we underestimated the price effect. **Revenue growth is higher than Kofola's own previous estimate** (revenue +14%, volume +7%). This is **due to the consolidation of the Pivovary CZ group at the beginning of March**. Organic growth of Kofola itself was +13.2% as expected. Energy costs are slightly lower than last year. Packaging and sweeteners were also lower. On the other hand, personnel and marketing costs increased. **EBITDA amounted to CZK265m**. This represents an **increase of +21.4%** compared to the previous year. Double-digit sales growth was achieved in all Kofola segments. However, EBITDA decreased in the main sector, CzechoSlovakia, where EBITDA decreased slightly by 5.5% on sales growth of +11%. This is likely due to acquisition-related costs. EBITDA in the Adriatic and Fresh&Herbs sectors grew strongly by +71% and +63% respectively. The reasons are like those mentioned above. Net profit swung to a loss of CZK18.7m. This was due to exchange rate changes and the revaluation of EUR loans.

Compared to the full-year guidance, 1Q24 EBITDA is almost 16% of the target. The first quarter is seasonally the weakest. It will not have the same impact as the second and especially the third quarter, which are the most important for the full-year results.

Full Year 2024 Forecast

Full year 2024 results could be announced in mid-February 2025. The next quarterly report is scheduled for September 23, 2024, when Kofola will report figures for the second quarter and first half of the year, respectively.

Please note that as of this year (2024), the right-wing government of Prime Minister Fiala has increased the corporate income tax from 19% to 21%. There has also been an increase in the VAT rate on beverages. The VAT rate is now 21%, up from 15%. This is likely to mean further price increases for the end consumer and may also have a negative impact on demand for beverages.

CZKm	2023	e2024 (KB)	y/y
Sales	8,690	10,883	25%
EBITDA	1,253	1,709	36%
margin	14.4%	15.7%	1.3pps
EBIT	747	1,139	52%
Net Profit	369	709	92%

Source: Kofola; Economic & Strategy Research, Komerční banka

The significant yoy growth is due to Kofola's M&A activity. At the end of January this year, the company acquired 49% of Mixa Vending. The latter focuses on the operation of food and beverage vending machines. At the beginning of March, Kofola also completed the acquisition of 51% of the Pivovary CZ group. Read more about the acquisitions in the M&A section below.

In our model, we expect total sales to grow by 25.2% yoy to CZK10.9bn. We expect volume growth to be slightly higher than last year. This should also reflect the increase in consumers' real purchasing power. Operating costs will increase for raw materials, administration and distribution. We also expect personnel costs to rise as the number of employees increases. Acquisitions this year could increase this number by about 600 to about 2,650. On the other hand, energy costs should be lower. According to our estimates, EBITDA should grow by +36.6% yoy to CZK1.7bn in 2024. We also expect the margin to increase by more than one percentage point (+1.3 pps). We expect net profit to reach CZK709m (+92.2% yoy) in 2024. We believe our estimates are conservative. For 2024, they are in line with the company's revenue guidance and closer to the upper end of Kofola's EBITDA target.

Full-year guidance: Kofola's management expects EBITDA of CZK1.55-1.80bn and revenue growth of +25% yoy this year. These figures include the recent acquisitions. Kofola itself (comparable to 2023) should achieve EBITDA of CZK1.35-1.45bn and sales growth of +7% yoy. Kofola's performance is subject to seasonal factors. Due to the seasonality of Kofola's operations, the second and third quarters are the most important for full-year results.

M&A

Acquisitions are one of the channels through which the company will continue to grow its business beyond its normal organic growth.

Kofola has been very active recently in terms of new acquisitions. At the beginning of the year, it completed the purchase of apple orchards in Libina. In January, it completed the acquisition of 49% of Mixa Vending, a company that operates beverage and food vending machines. The most significant transaction followed in early March. Kofola entered the brewing business by acquiring a 51% stake in the Pivovary CZ group. This will complement its portfolio of soft drinks and cider. We also believe that Kofola has a pre-emption right on the remaining shares. If the remaining shareholders (RSJ 29% and Úsovsko 20%) decide to exit these operations, we would expect Kofola to buy their shares.

Mixa Vending has sales of approximately CZK170m and EBITDA of CZK36m. It employs approximately 100 people.

Pivovary CZ includes the traditional Zubr, Holba and Litovel breweries. The group has annual sales of approximately CZK1.3bn and EBITDA of approximately CZK250m. Kofola will thus expand its portfolio with traditional beer brands.

We expect that Kofola will now focus on consolidating these companies. However, we are confident that it will continue to monitor the market and further expansion opportunities. Potential acquisition targets could include businesses that would further expand the existing beverage business. Another area where potential acquisitions could be made is in the ingredients sector, especially at the virgin level. Indeed, Kofola attaches great importance to the sustainability of its business. Any further acquisitions would be in line with the sustainability philosophy that Kofola promotes.

M&A activity may result in, among other things, an increase in leverage. This could, for example, affect Kofola's ability to pay a dividend to its shareholders (see Leverage and Dividends below). However, not all M&A transactions have resulted in a material increase in debt. Kofola could

finance larger acquisitions by issuing new shares, through a joint venture or with a financial partner.

Long-term forecasts

Sales (CZKm)

EBITDA (CZKm)

Source: Kofola; Economic & Strategy Research, Komerční banka

The new acquisitions, especially Pivovary CZ, will significantly increase Kofola's earnings. Moreover, Pivovary CZ should have its core business in the same region where Kofola has traditionally been very strong. This is particularly true in Moravia. We estimate that although the breweries are geographically mainly part of the Czechoslovak operations, Kofola is likely to start disclosing data on the additional Breweries segment in its next report (2Q24 results, September 23, 2024). There will now be four core businesses Czechoslovakia, the Adriatic region, which includes Slovenia and Croatia, Fresh&Herbs (UGO, tea business, syrups, juices) and finally Brewing.

EBITDA (2023)

EBITDA by segments (CZKm)

Expected EBITDA

Source: Kofola; Economic & Strategy Research, Komerční banka

Czechoslovak operations have the highest share in EBITDA. Last year, it accounted for 75% of total EBITDA. The Adriatic region was a close second with 16%, followed by the F&H sector with 9%. This can be clearly seen in the pie chart above. However, once the acquisitions are completed, especially Pivovary CZ, there will be another segment of the business that should bite off shares in all the sectors mentioned.

According to our estimates, Czechoslovakia will continue to play the leading role, where its share could fall to around 62%. Pivovary CZ could account for 17% and the Adriatic region 14%. The rest would be supplied by F&H with 7%. This can also be seen in the chart on the top right.

This year (2024), Kofola would like to achieve EBITDA of CZK1.55-1.80bn with revenue growth of +25%. For EBITDA, this means yoy growth of almost +34%. This forecast includes new acquisitions. CAPEX should be up to 40% of EBITDA and debt should remain below 3.0x. A standalone Kofola comparable to 2023 should have an EBITDA of CZK1.35-1.45bn and revenues up +7% yoy.

Please note that Kofola's performance is affected by seasonality. The summer months are the strongest. The strongest quarter is the third "holiday" quarter, which has contributed 44% of total EBITDA over the last three years. This is followed by 2Q with 30%, and the weakest 4Q (14%) and 1Q (12%). We expect the new business to have the same seasonality as Kofola's existing business.

For the full year, we expect Kofola to achieve sales growth of +25.2% yoy (CZK10.9bn). We expect organic growth in addition to acquisition growth, where we should see a price effect. In the final year (2028) of the forecast period, we expect sales to reach CZK13.3bn. This corresponds to a compound annual growth rate (CAGR) of +8.9%. Czechoslovakia will remain the most important segment with a share of around 60%. This is followed by breweries (15%), the Adriatic region (15%) and F&H (10%).

Direct material costs include the categories of packaging and sweeteners. Packaging accounts for 46.8% of material costs in 2023 (down from 57.8% in 2022). Sweeteners and other (e.g. concentrates) accounted for 36.6% (23.8% in 2022) and 16.6% (18.4% in 2022), respectively.

The charts below show the price development of packaging (PET) and sugar. For packaging, we can see that they were more or less stable last year, with a decline at the end of the year. Since the beginning of this year, they have been more or less at the same level as at the end of last year. A similar trend can be seen for sugar, whose prices declined at the end of last year. And PET prices are expected to decline slightly this year, while we expect sugar prices to be more or less stable.

Energy costs are also expected to decline. This was also reflected in the 1Q24 results. After the energy crisis, which culminated in a period of very high energy prices, energy costs will likely fall this year.

Source: Bloomberg

Total operating costs will grow by +8.3% (CAGR 2024-2028), reaching CZK4.7bn in the last year of the period. Costs will increase in line with higher volumes, as well as personnel costs due to the higher number of employees. The majority, about three quarters, are sales, marketing and distribution costs. We expect average growth in this category of +7.8% to CZK3.6bn in 2028. We estimate a slightly higher growth rate for administrative costs (+8.6%, CZK-1.1bn in 2028). Given that the home region, where Kofola is traditionally strongest, is also a core market for Pivovary CZ, there should be cost synergies.

We expect Kofola's EBITDA to reach CZK1.7bn this year, representing a yoy growth of +36.3%. In the last year of the forecast period, it should grow to CZK2.2bn, representing a CAGR of +11.6%.

Margin comparison (%)

Source: Kofola; Economic & Strategy Research, Komerční banka

In 2022, Kofola's margins declined due to the peak energy crisis and high energy costs. In the previous years, the restaurant business was particularly affected by restrictions related to the coronavirus pandemic. This explains the decline in the EBITDA margin in these years. Last year, the EBITDA margin was 14.4%. We expect it to grow to over 17% in the coming years. The next few years should also be around that level.

Dividend policy

Kofola traditionally pays a dividend to its shareholders in the amount of approx. CZK300m per year. This is equivalent to CZK13.50 per share. For the year 2021 alone, i.e. the payout in 2022, a distribution of CZK11.30 was made. The reduction of the dividend this year was due to restrictions related to the Covid-19 pandemic. This year (August 9), Kofola paid the traditional CZK13.50/shr. This represents a gross yield of +4.5%.

The dividend is expected to increase over the forecast period.

We expect Kofola to pay a higher dividend than usual starting next year, i.e. from this year's profit. Kofola's earnings will grow substantially and the scope for profit sharing will increase significantly. This is against the backdrop of what we estimate will be lower leverage. We expect the company to share its profits with its shareholders. We therefore expect Kofola to change its dividend policy. We conservatively estimate a payout of 60% of net profit. This would imply a dividend of CZK19.10 per share for next year's payout and an attractive gross dividend yield of +6.4%.

If the payout ratio had remained at 60%, the dividend would have amounted to CZK24 in 2028. And the gross yield would have been +8%.

Dividend projections (CZK)

Source: Kofola; Economic & Strategy Research, Komerční banka; in year in which is paid

There are also risks that could jeopardize the dividend payment. Kofola's appetite for acquisitions could be one of them. The dividend could also be affected by current market conditions, such as the Covid-19 crisis and related restrictions, the energy crisis, or a sharp increase in costs. Or high leverage.

Indebtedness

The leverage will be reduced to a very comfortable level.

Kofola's target is to have a leverage ratio (net debt to EBITDA) of up to 3.0x at the end of this year. Bank covenants are set at 3.5x.

Kofola's leverage was 2.7x at the end of the first quarter. This is a slight increase from 2.28x at the end of 2023. This is due to the completion of recent acquisitions. For the rest of the year, no significant amount is expected to be due. In our forecasts, we also expect debt of 2.7x at the end of this year.

In the following years, it should decline slightly below the 2.0x level. We consider this level of debt to be comfortable. It could, for example, allow for further acquisitions or a higher dividend. If a larger acquisition were to take place, we could see debt increasing, probably in the short term, perhaps even above the level of the bank covenants.

The chart below shows that even though leverage has shot up, Kofola has managed to reduce it quickly. But even with such leverage, Kofola has not lost its ability to pay a dividend (see above).

Leverage (Net Debt / EBITDA)

Source: Kofola, Economic & Strategy Research, Komerční banka

Valuation

Sector comparison

Kofola trades at a significant discount to foreign competition.

The Kofola Group does not have any comparable publicly traded competitors in the Czech Republic. Therefore, we selected companies with a similar focus that sell their products in the Czech Republic or other European countries for comparison. At the same time, we used the S&P 500 Soft Drinks sector index for comparison with the overall soft drinks market.

The table below presents selected multiples we use to compare Kofola to its peer group. On all multiples (see table below), Kofola trades at a significant discount to the peer group median. However, it also offers an above-average dividend yield of 4.5% compared to the sector. This is arguably the highest in the sector.

A relative comparison of the selected multiples indicates a significant discount in Kofola's valuation compared to its peers.

Please note that relative comparisons can be misleading. This is primarily due to differences between individual companies. These differences may relate to size, geography, product mix or capital structure. We consider this method of relative comparison with competitors to be supplementary only.

Target price

We used a two-stage DCF model to value the company.

Our new target price is CZK402.

We have valued Kofola using a two-stage discounted free cash flow (DCF) model with a five-year explicit period. The free cash flow is discounted using a weighted average cost of capital (WACC) in the range of 7.2%-8.4% over the period (2024-2028) and 8.4% for perpetuity with an expected long-term growth rate of 2%. Our valuation also includes a discount for low liquidity. Based on the DCF model, we estimate the **fair value of Kofola's shares to be CZK402** per share.

Kofola valuation

Main risks

- **Restrictive measures:** Any restrictions or limitations (such as in recent years in connection with the coronavirus pandemic) have a negative impact on Kofola's business. This is because they restrict distribution channels and reduce demand for the Group's products.
- **Changing Consumer Preferences:** Consumer preferences evolve over time and it is important that the company keeps abreast of current trends and directions in this area. For example, there is a growing interest in healthy lifestyles (healthy eating). Failure to adapt could jeopardize Kofola's sales and market share.
- **Developed markets:** In the countries where the Kofola Group operates, the soft drink market is highly competitive. Both international and local producers compete by offering a wide range of products. This situation increases the risk of price pressure or loss of market share.
- **Retail chains depress margins:** Customers generally prefer to buy the discounted goods that the retail segment can offer them. This makes the retail segment more important and increases its bargaining power vis-à-vis the Kofola Group. This increases the pressure on selling prices or prevents increases in input prices from being reflected in the final price.
- **Inputs:** Raw materials such as sugar/sweeteners and packaging materials are one of the most significant cost items for the Group. Their prices are based on market prices for raw materials such as sugar and polyester resin (or crude oil). A sudden increase in the price of these raw materials would have a negative impact on the profitability of the products and the Kofola Group as a whole.
- **M&A activity:** Organic growth may be limited. Therefore, growth through acquisitions is offered. Kofola is very active in M&A (Ondrášovka and Karlovarská Korunní, Mixa Vending, Pivovary CZ). Acquisition is a complex process that does not always turn out in the company's favor, e.g. there is a risk of overpaying for the target company.
- **Exchange rate:** A number of raw materials (mainly sugar) used in the Group's production are purchased in EUR or in local currencies with a valuation based on EUR. The Group is exposed to the risk of fluctuations in the EUR exchange rate against local currencies.
- **Interest rate fluctuations:** As the Kofola Group has bank loans in its portfolio, it is exposed to interest rate risk, which is partially offset by hedging derivatives.

The information herein is not intended to be an offer to buy or sell, or a solicitation of an offer to buy or sell any securities. All information and opinions have been obtained from or are based on sources believed to be reliable, but their completeness and accuracy are not guaranteed by Komerční banka, a.s., even though Komerční banka, a.s. believes them to be fair and not misleading or deceptive. The views of Komerční banka, a.s. reflected in this document may change without notice.

Komerční banka, a.s. and its affiliated companies may from time to time deal in, profit from the trading of, hold or act as market makers of securities, or act as advisers, brokers or bankers in relation to securities or derivatives thereof emitted by persons, firms or entities mentioned in this document.

Employees of Komerční banka, a.s. and its affiliated companies, or individuals connected to them may from time to time have a position in or be holding any of the investments or related derivatives mentioned in this document. The authors of this document are not authorized to acquire the investment instruments mentioned in this document. This does not apply to cases when the investment recommendation mentioned in this document represents dissemination of an investment recommendation earlier produced by third parties according to Chapter III of regulation (EU) 2016/958. Komerční banka, a.s. and its affiliated companies are under no obligation to provide any services to their clients on the basis of this document.

Komerční banka, a.s. does not accept any liability whatsoever arising from the use of the material or information contained herein beyond what is required by law. This research document is primarily intended for professional and qualified investors. Should a private customer obtain a copy of this report, they should not base their investment decisions solely on the basis of this document and should seek independent financial advice. The investors must make their own informed decisions regarding the appropriateness of their investments because the securities discussed in this report may not be suitable for all investors.

The performance attained by investment instruments in the past may not under any circumstance serve as an guarantee of future performance. The estimates of future performance are based on assumptions that may not be realized. Investment instruments and investments are connected with different investment risks, the value of any investment can rise and fall and there is no guarantee for the return of the initial invested amount. Investment instruments denominated in foreign currencies are also subject to fluctuations caused by changes in exchange rates, which can have both positive and negative influences particularly on the prices of the investment instrument and consequently on the investment return.

This publication is issued by Komerční banka, a.s. which is a bank/stockbroker according to the applicable legislation and thus regulated by the Czech National Bank. Komerční banka, a.s. applies various measures to prevent conflict of interests in the process of creating investment recommendations, such as the implementation of an appropriate internal separation including information barriers between different departments of Komerční banka, a.s. in compliance with the requirements imposed by applicable regulation. The employees of Komerční banka, a.s. proceed in accordance with the internal regulations governing conflict of interest.

The evaluation of employees creating investment recommendations is never by any means tied with the volume or profit of the trades with instruments mentioned in this document done by Komerční banka, a.s., or the trades of Komerční banka, a.s. with the issuers of such instruments. However, the evaluation of the authors of this document is linked to the profits of Komerční banka, a.s. which also partially include the results of trading with investment instruments.

The recommendations mentioned in this document are intended for the public and the document before its publication is not available to persons not involved in the creation of this document. As per our practice, the issuers do not receive a copy of research reports prior to their publication. Each author of this research report hereby states that (i) the views expressed in the research report accurately reflect his or her personal views about any and all of the securities or issuers at stake.

This document and its contents is not designed for persons with permanent residence or seat in the United States of America and to persons who are deemed as "U.S. persons", as defined in Regulation S under the US Securities Act of 1933, as amended.

Please refer to our website <http://www.trading.kb.cz> for more details.

The recommendation in this document and/or the document itself was not disclosed to the issuer before its dissemination.

This recommendation is not updated at regular intervals. The date of the next update has not yet been determined and finally will be influenced by relevant changes of the facts used as the ground for this recommendation to reflect proper development in the industry and/or the analyzed company.

The main methods KB is using for setting target price for stocks are discounted free cash flow analysis and sector comparison. Other methods may also be used if deemed appropriate by the analyst (e.g. sum of parts valuation, discounted dividend valuation, discount / premium to NAV). Target price is set for the time period of 12 months. KB is using three grades of investment recommendation: buy, hold and sell. The recommendation is set for the time period of the next 3-6 months. The most important factor for setting the recommendation is the difference between actual market price and target price calculated by KB equity research. The recommendation also reflects other factors the analyst expects to influence the stock and market in the time period of 3-6 months after its publication. The target price substantially above current price does not automatically mean a buy recommendation for the 3-6 months following the first period of 3-6 months since publication of the recommendation. Valuation methods and factors key for setting the recommendation are explained in the text of each analysis.

The chart below shows the structure of grades of valid investment recommendations of equity research of KB Economic & Strategy Research (8 recommendations).

Investment recommendations of KB equity research

Source: Economic & Strategy Research, Komerční banka

KB Equity Research ratings on a 12 month period

BUY: absolute total shareholder return forecast of 15% or more over a 12 month period.

HOLD: absolute total shareholder return forecast between 0% and +15% over a 12 month period.

SELL: absolute total shareholder return forecast below 0% over a 12 month period.

Total shareholder return means forecast share price appreciation plus all forecast cash dividend income, including income from special dividends, paid during the 12 month period. Ratings are determined by the ranges described above at the time of the initiation of coverage or a change in rating (subject to limited management discretion). At other times, ratings may fall outside of these ranges because of market price movements and/or other short term volatility or trading patterns. Such interim deviations from specified ranges will be permitted but will become subject to review by research management.
