## CEZ results for 2Q20

CZKbn	2Q19	2Q20	yoy	KB est.	Consensus
Revenues	48.2	49.2	2.1%	46.4	49.1
EBITDA	13.6	12.8	-5.5%	11.2	12.4
margin	28.2%	26.1%	2.1pp	24.2%	25.3%
EBIT	6.0	3.2	-48%	4.1	5.0
Net profit (adjusted)	3.8	2.5	-35%	1.9	2.7

Source: CEZ, Economic &amp; Strategy Research, Komerční banka; the consensus is compiled by CEZ, based on estimates of 13 analysts

This morning, CEZ reported results for the second quarter of this year, which are better in terms of EBITDA compared with the consensus. EBITDA is CZK12.8bn (-5.5% yoy, consensus CZK12.4bn) with revenues of CZK49.2bn. Adjusted net profit then reached CZK2.5bn. The results are lower year-on-year due to weaker demand resulting from restrictive measures related to COVID-19. Unfortunately, this was not offset by higher power prices. CEZ boosts its full-year targets, which is clearly positive and indicates a high dividend. Overall, the reported results are a positive surprise for us.

**Key trends in the main segments: (1)** In the *Traditional Energy* segment, CEZ produced 12.7 TWh, which is below last year's production (14.2 TWh). Behind this decline is mainly the lower production in coal-fired power plants due to longer outages. Lower production in coal sources is also related to the growth of the price of emissions allowances, which affected the composition of the production mix. Production at nuclear power plants also fell slightly (longer shutdowns). On the contrary, production at the CCGT plant and in pumped storage power plants increased, but this could not compensate for the above-mentioned decrease. Due to the reasons stated above, CEZ again reduced the target for full-year production in traditional energy to 59.3 TWh from 61.8. **(2)** In the new energy segment, CEZ should produce 2.4 TWh for the whole year, which is slightly higher than the previous estimate of 2.3 TWh. **(3)** EBITDA reached CZK12.8bn (-5.5% yoy) in the second quarter. This slightly exceeded the market consensus (CZK12.4bn). The situation associated with the pandemic did not have a surprisingly large impact on distribution. However, it significantly affected the mining segment when low demand led to a decline in mining. **(4)** Net profit reached CZK0.5bn (-85% yoy). The year-on-year decrease is due to higher depreciation and provisions for assets in Romania, Bulgaria and Poland (approximately CZK2bn). Adjusted net profit, which serves as the basis for calculating the dividend, then amounted to CZK2.5bn (-35% yoy).

**Debt:** Net debt reached CZK153.7bn. This represents a decrease from CZK167.9bn that CEZ had at the end of the first quarter of 2020. The leverage measured by the net debt / EBITDA ratio decreased to 2.4x from 2.6x.

**Management outlook:** The company's management has increased its full-year guidance. EBITDA should be in the range of CZK62-64bn (previous CZK61-64bn). Adjusted net profit should now increase to CZK21-23bn from the previous CZK19-22bn. The difference is the one-off positive effect due to interest on arrears related to gift taxes on emissions allowances. This adjusted net profit will serve as the basis for calculating the dividend. This promises a

gross dividend yield of almost 9% (at 100% payout) and the dividend in absolute terms should exceed CZK40 per share (CZK34 paid out this year).

**Potential impact on our estimates and our recommendation:** The reported numbers are better than our expectations, which were among the lowest on the market. But the difference is not big. From our point of view, the risks associated with the completion of a nuclear power plant are minimal. The government should negotiate agreements in Brussels which, in the event of a project, give CEZ the option of a put option (sale of the state) and, in addition, guarantee the purchase prices of electricity produced at the new unit. Investments associated with the construction of a new nuclear power plant will be negligible in the approx. next 10 years (CZK2.5-4.0bn). We now leave our target price and recommendation unchanged at CZK621 with the Buy recommendation.

**Main risks:** Unplanned shutdowns of conventional power plants and falling electricity prices.

**Expected events:** A conference call will be held in the afternoon on the reported results. The results for the third quarter should be announced on 10 November 2020.

The recommendation in this document and/or the document itself was not disclosed to the issuer before its dissemination.

This recommendation is not updated at regular intervals. The date of the next update has not yet been determined and finally will be influenced by relevant changes of the facts used as the ground for this recommendation to reflect proper development in the industry and/or the analyzed company.

The main methods KB is using for setting target price for stocks are discounted free cash flow analysis and sector comparison. Other methods may also be used if deemed appropriate by the analyst (e.g. sum of parts valuation, discounted dividend valuation, discount / premium to NAV). Target price is set for the time period of 12 months. KB is using three grades of investment recommendation: buy, hold and sell. The recommendation is set for the time period of the next 3-6 months. The most important factor for setting the recommendation is the difference between actual market price and target price calculated by KB equity research. The recommendation also reflects other factors the analyst expects to influence the stock and market in the time period of 3-6 months after its publication. The target price substantially above current price does not automatically mean a buy recommendation for the 3-6 months following the first period of 3-6 months since publication of the recommendation. Valuation methods and factors key for setting the recommendation are explained in the text of each analysis.

The chart below shows the structure of grades of valid investment recommendations of equity research of KB Economic & Strategy Research (8 recommendations).

#### Investment recommendations of KB equity research

#### KB Equity Research ratings on a 12 month period

**BUY:** absolute total shareholder return forecast of 15% or more over a 12 month period.

**HOLD:** absolute total shareholder return forecast between 0% and +15% over a 12 month period.

**SELL:** absolute total shareholder return forecast below 0% over a 12 month period.

Total shareholder return means forecast share price appreciation plus all forecast cash dividend income, including income from special dividends, paid during the 12 month period. Ratings are determined by the ranges described above at the time of the initiation of coverage or a change in rating (subject to limited management discretion). At other times, ratings may fall outside of these ranges because of market price movements and/or other short term volatility or trading patterns. Such interim deviations from specified ranges will be permitted but will become subject to review by research management.
